PROJECTS

Daily auto-sync TSM ranking report

Automated daily sync that pulls TSM data and generates daily & monthly ranking reports. Eliminates manual copy-paste and reduces errors.

Telegram notification bot

TSMs submit cross-sell approval requests via a designated sheet. Bot notifies me instantly, and TSMs get notified once approved — no need to monitor the sheet constantly.

Sales commission tracker - auto transfer

Auto-generates and routes commission data to each TSM's individual sheet. Eliminates missed entries from manual copy-paste across multiple brands.

Xsell bonus code - auto update & TL transfer

App Script automation handles NGR range filtering, bonus category & code assignment, and VIP tier calculation. Results auto-transferred from master sheet to TL sheet.

OUTCOMES

✓ Significant time saved across all workflows

✓ Reduced human error in reporting & data transfer

✓ Real-time notifications speed up cross-sell approvals

✓ Commission & bonus processes fully automated end-to-end

NEXT MONTH'S FOCUS

In progress

Continue identifying gaps in daily operations. Currently building an **auto-filter tool for QP2 cross-sell leads** — excludes leads that have already converted (FTD) and surfaces unconverted leads for re-assignment to other TSMs, reducing manual lead management and ensuring no leads fall through the cracks.
